In mathematics, the logarithm is the inverse function to exponentiation. That means the logarithm of a given number x is the exponent to which another fixed number, the base b , must be raised, to produce that number x . In the simplest case, the logarithm counts the number of occurrences of the same factor in repeated multiplication; e.g., since $1000 = 10 \times 10 \times 10 = 10^3$, the "logarithm base ...

Definition of a logarithm: If a and b is a constant, then $\log_a b$ if and only if $a^{\log_a b} = b$. In the equation $\log_a b = c$, a is referred to as the logarithm, b is the base, and c is the argument. The notation is read "the logarithm (or log) base of b ." The definition of a logarithm indicates that a logarithm is an exponent. $\log_a b$ is the logarithmic form
