Manual

The Problem Your Windows machine has IIS, PHP and Oracle. You create a PHP script using the oci8 extension and it calls PHP5 functions like oci_connect (), oci_parse (), or PHP4 functions like OCILogon () and OCIParse (). You invoke the script and get errors like:

How to Use IIS, PHP and Oracle | Oracle Scripting and ...

This software is in PHP. The first thing I would like is to overcome the login and session management. In APEX, this is pretty much handled by Oracle, so I never paid much attention to it, but in PHP its a little trickier with the [PHPSESSID] as I can see if the phpinfo.

APEX and PHP | Oracle Community
The entire PHP script is called ajax.php.
(See sample code zip.) The purpose of
this script is to run a query in Oracle and
print a message based upon the results
of the query. This is all very basic
Oracle, SQL, and PHP, but I'll run through
it to clarify what's happening.

Creating an Ajax Process Using PHP and Oracle

Oracle's free Underground PHP and Oracle Manual contains more detail on using PHP with Oracle Database. For more information about PHP and Oracle, visit the OTN PHP Developer Center. There is also a PHP Forum to post any

questions.
